

# Report Template Example

*author: Julian R. date: 2025-11-26 project: Example Project*

## Overview

*This is an example of using template placeholders in your markdown files. The `{{name}}` and `{{date}}` placeholders will be automatically replaced when generating the PDF.*

## Benefits

- *No hardcoded names in the code*
- *Flexible author information via environment variables*
- *Consistent date formatting*

## Usage

*Set your name:*

```
export REPORT_AUTHOR="Your Full Name"  
./main example-template.md output.pdf
```

*Or use `{{author}}` instead of `{{name}}` for clarity.*
